

CASE STUDY:

# A Comprehensive Approach to Musculoskeletal Care

*Manufacturing company experiences an 88% reduction in workers' compensation costs with Briotix Health suite of solutions*

After successfully implementing Briotix Health's BTE Post Offer Employment Testing (POET) to reduce new hire workplace injuries, a large-scale manufacturing company was looking to expand injury prevention programming to further drive down injury rates within the work environment.

## BRIOTIX HEALTH SOLUTION

After evaluating the needs of the manufacturer, company management determined launching the full suite of Briotix Health offerings would provide them with the best results to dramatically reduce injuries and improve the health of their workforce. Rolling out Industrial Sports Medicine™ (ISM), Return to Work, and creating Onsite Occupational Clinics fully encompassed clients injury prevention needs in all operations.

### INDUSTRIAL SPORTS MEDICINE™

Early discomfort management, ergonomic assessments, and tailored job coaching significantly reduced the risk of workplace musculoskeletal disorders.

### RETURN TO WORK

Return to Work services guided employees back to the workplace after an injury and taught techniques to reduce the rate of reoccurring injuries.

### ONSITE OCCUPATIONAL CLINICS

Onsite Occupational Clinics spread across multiple facilities provided a renewed focus on employee health, injury prevention, and improved fitness.

### Client Partnered With Briotix Health

Year 1

Year 2

Year 3

Year 4

## RESULTS

Client and Briotix Health partner to address new hire injury rates with POET program

With the success of the POET program, client rolls out ISM program

Client continues expansion of injury prevention program with the establishment of a Briotix Health onsite clinic and return-to-work program

- 88% Cost reduction in workers' compensation
- Savings of \$4.9 million
- Continued reduction in recordable injury rates
