

CASE STUDY: Global Technology Company Saves \$1.1M in One Year after Implementing Self-Assessment Tool

A global technology company was looking to reduce the cost of their analog ergonomics process while improving the injury prevention, symptom resolution, and cost avoidance benefits of their program. The solution needed to be scalable and reach their entire workforce, regardless of global location.

Briotix Health Solution

After evaluating several ergonomic software solutions, company management selected Briotix Health's Office Health & Ergonomics (OHE) Solution, including Briotix.Works Office technology, because of the combination of ergonomic tools offered to employees with ergonomic needs.

Their tailored OHE solution was customized to offer the following:

ON-DEMAND TRAINING

Employees were empowered with a variety of on-demand learning tools via the Briotix.Works technology portal which not only allowed for consistent training to all employees globally, but was also leveraged to bring new hires up to speed quickly and effectively.

SELF-ASSESSMENT TOOL

When employees reported musculoskeletal discomfort, they were first required to complete an ergonomic self-assessment which guided them through the process of adjusting their workstations to address ergonomic issues and alleviate discomfort.

ERGONOMIC INTERVENTION

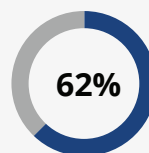

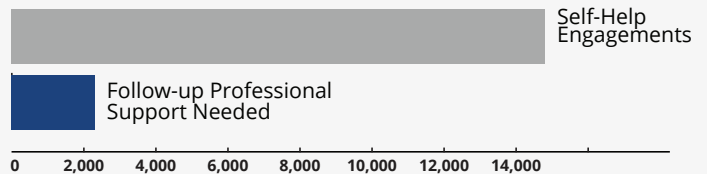

For those who were unable to resolve their support needs via the self-assessment tool, tailored virtual and onsite assessments were conducted by Briotix Health's professionals to identify and eliminate ergonomic risks and improve employee biomechanics and comfort.

Results

In the span of one year, the company experienced a 91% resolution with the Briotix.Works Office technology self-help and self-assessment tools only, resulting in only 9% of employees requiring professional ergonomic support.

This shift resulted in a direct, year-over-year program management savings of more than \$1.1 million (62%) while also driving injury rates down.

91% Resolution Rate After Self-Help Tools

Cost Reduction of
62% in One Year
